Education

Research

Robotics in Education

- Combines multiple disciplines
 - Mechanics, informatics, mathematics, ...
- Creative learning and enthusiasm for the STEM fields

PRIA – Team

Reseachers, educators, students

DI(FH) Mag. Dr. Gottfried Koppensteiner, Chairman

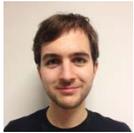

DI Dr. Wilfried Lepuschitz, Managing Director

DI Dr. Munir Merdan, Scientific Director

Mag. Tanja Tomitsch, Educational Director

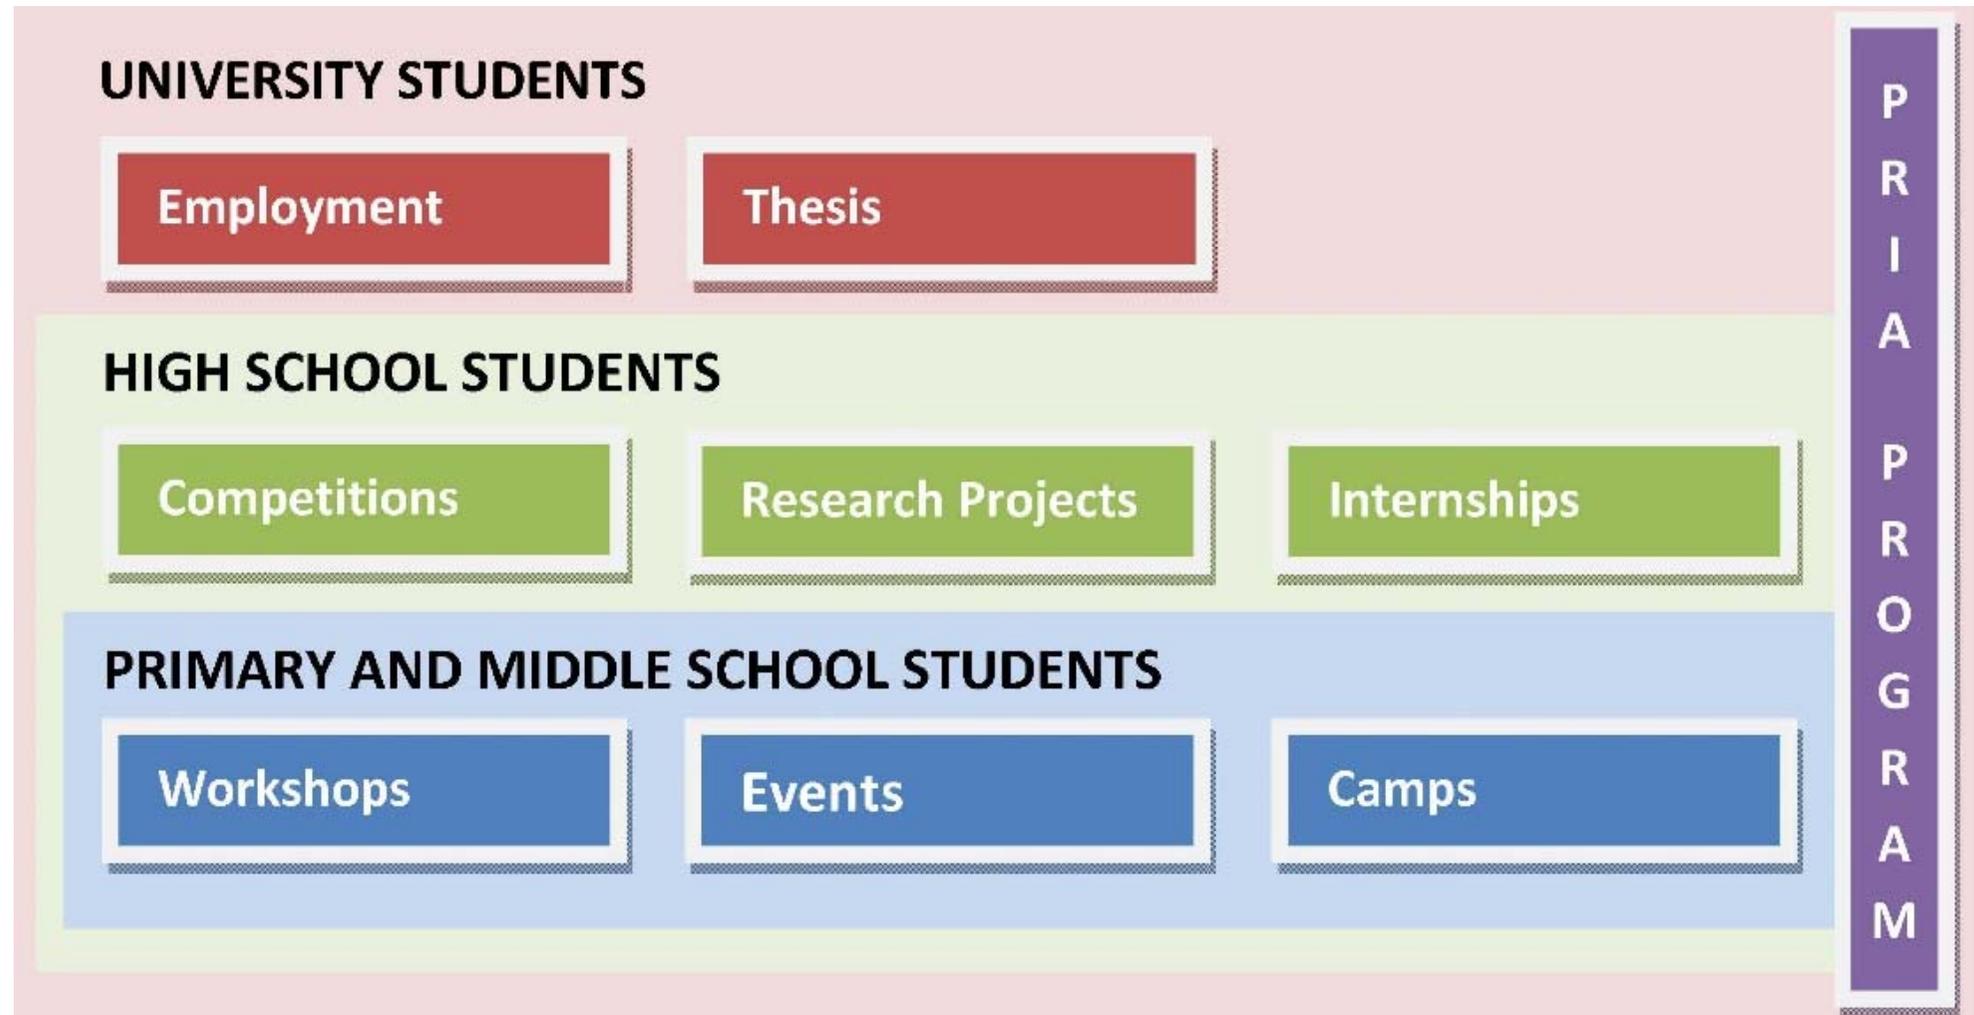

Clemens Koza, Research Assistant

Viktoria Zach, Research Assistant

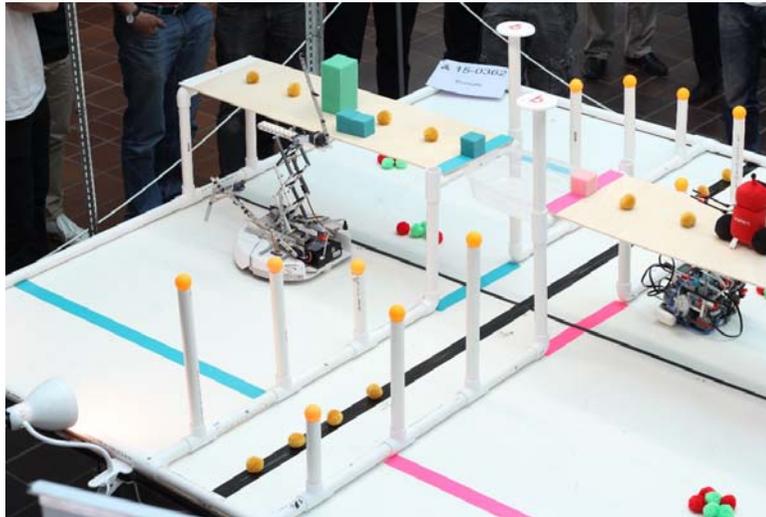

...currently 17 employees

Multiple entry points for students

Educational Robotics for STEM Education

Development and evaluation of ER4STEM framework

Educational robotics workshops in 6 European countries with over 4000 young learners in 3 years

ECER conferences

2016 in Austria, 2017 in Bulgaria, 2018 in Malta

ER4STEM repository for educators

MAKERS AT SCHOOL

FFG 860104, Talente regional, 2017-2020

Makers@School – Overview

- Communicate a better understanding of the maker-movement
- Necessity of various skills in regard to entrepreneurship and STEM
- Series of workshops (started from school year 2017/2018)
 - Design Thinking
 - Maker
 - 3D Printing
 - Programming
 - FTI (Research, Technology, Innovation)
- Maker-project in school and presentation (started from school year 2018/2019)

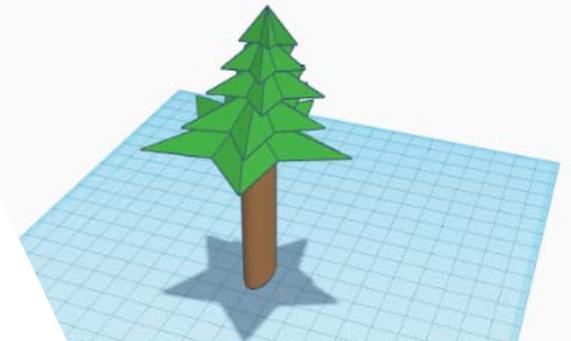

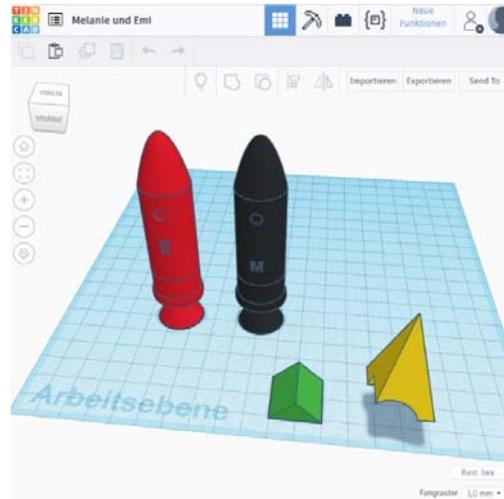

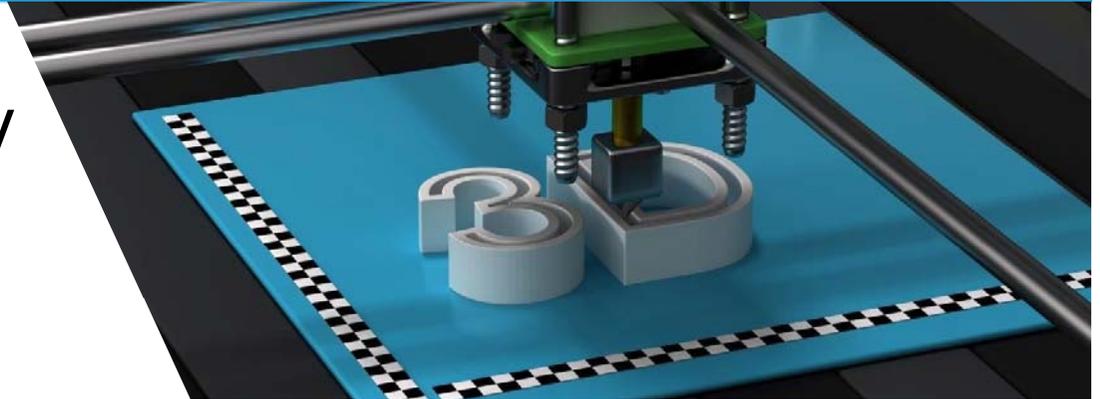

Workshop: Design Thinking

- Foster creativity
- Product development
- Tasks:
 - Develop glasses using provided materials
 - Enhance the glasses for researchers
 - Design a robot for given requirements

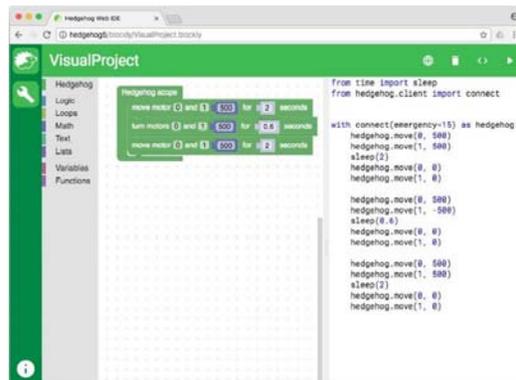

Workshop: 3D Printing

- Industry 4.0 Pilot Factory of Vienna University of Technology
- Industrial robots
- CNC-Machines
- 3D printing
- Tinkercad

Workshop: Programming

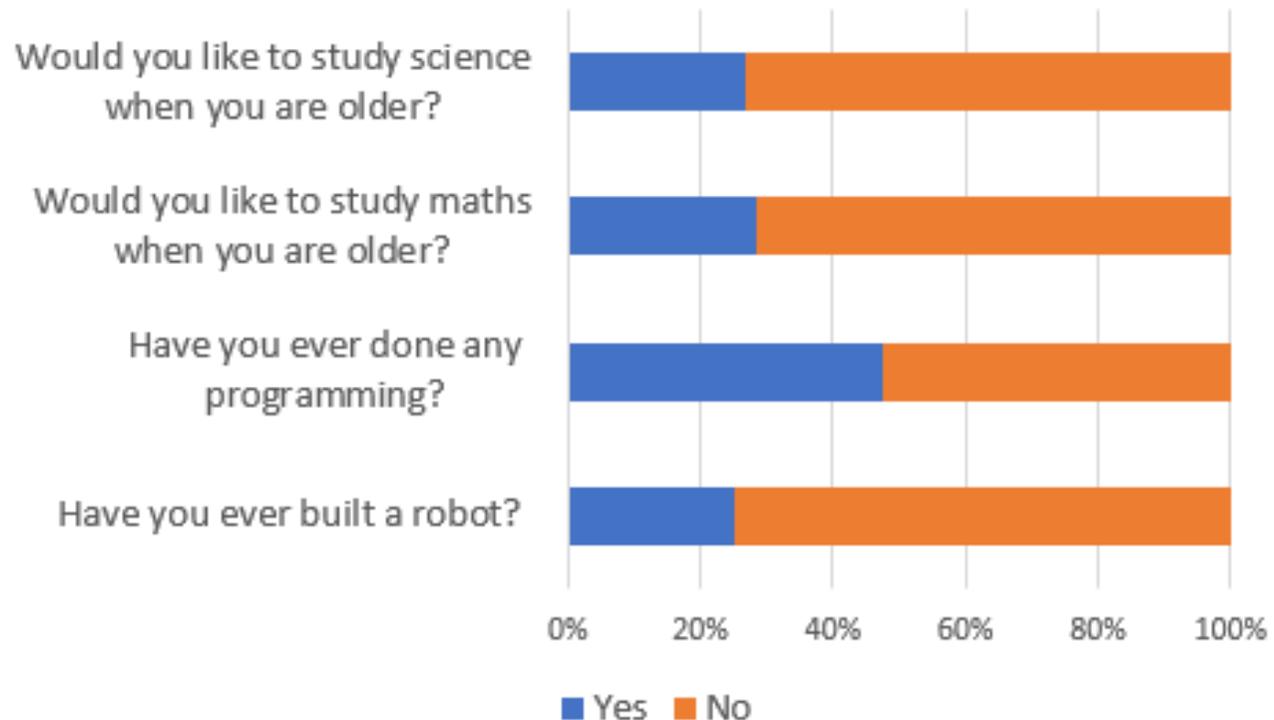

- Hedgehog controller
- Basic concepts about programming
- Graphical programming for primary school pupils
- Textual programming for secondary school pupils

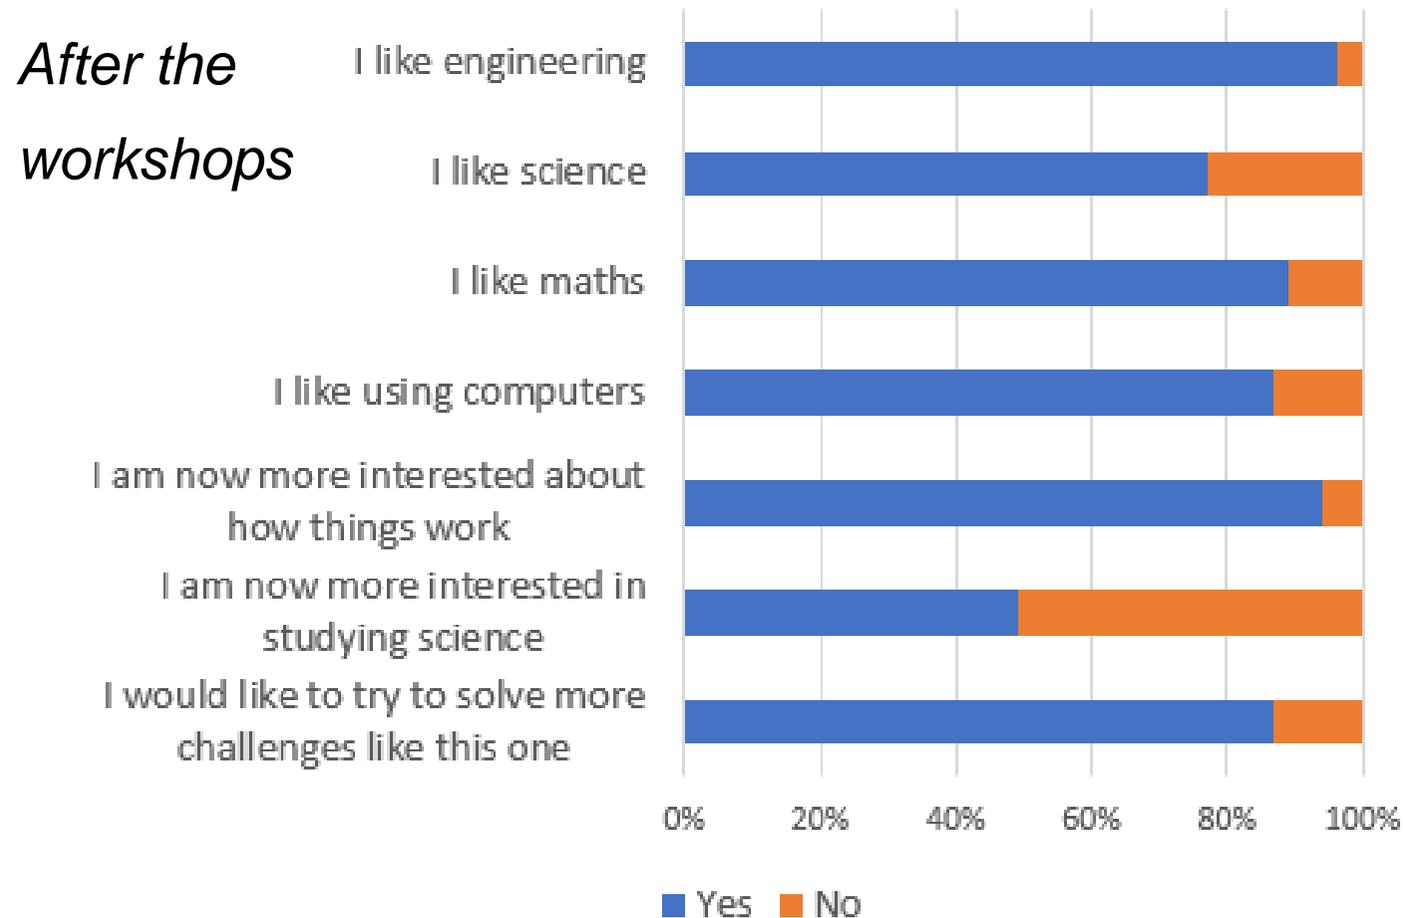

Quantitative Results of Workshops #1

➤ 179 pupils: 52% girls, 48% boys

Before the workshops

Quantitative Results of Workshops #2

Confirmed in interviews with pupils, e.g. “Yes, and if we can do hands-on activities and it functions afterwards, then I like it more, if we do more like that.”

Hedgehog

Educational Robotics Controller

Developed in the frame of:

SCORE!

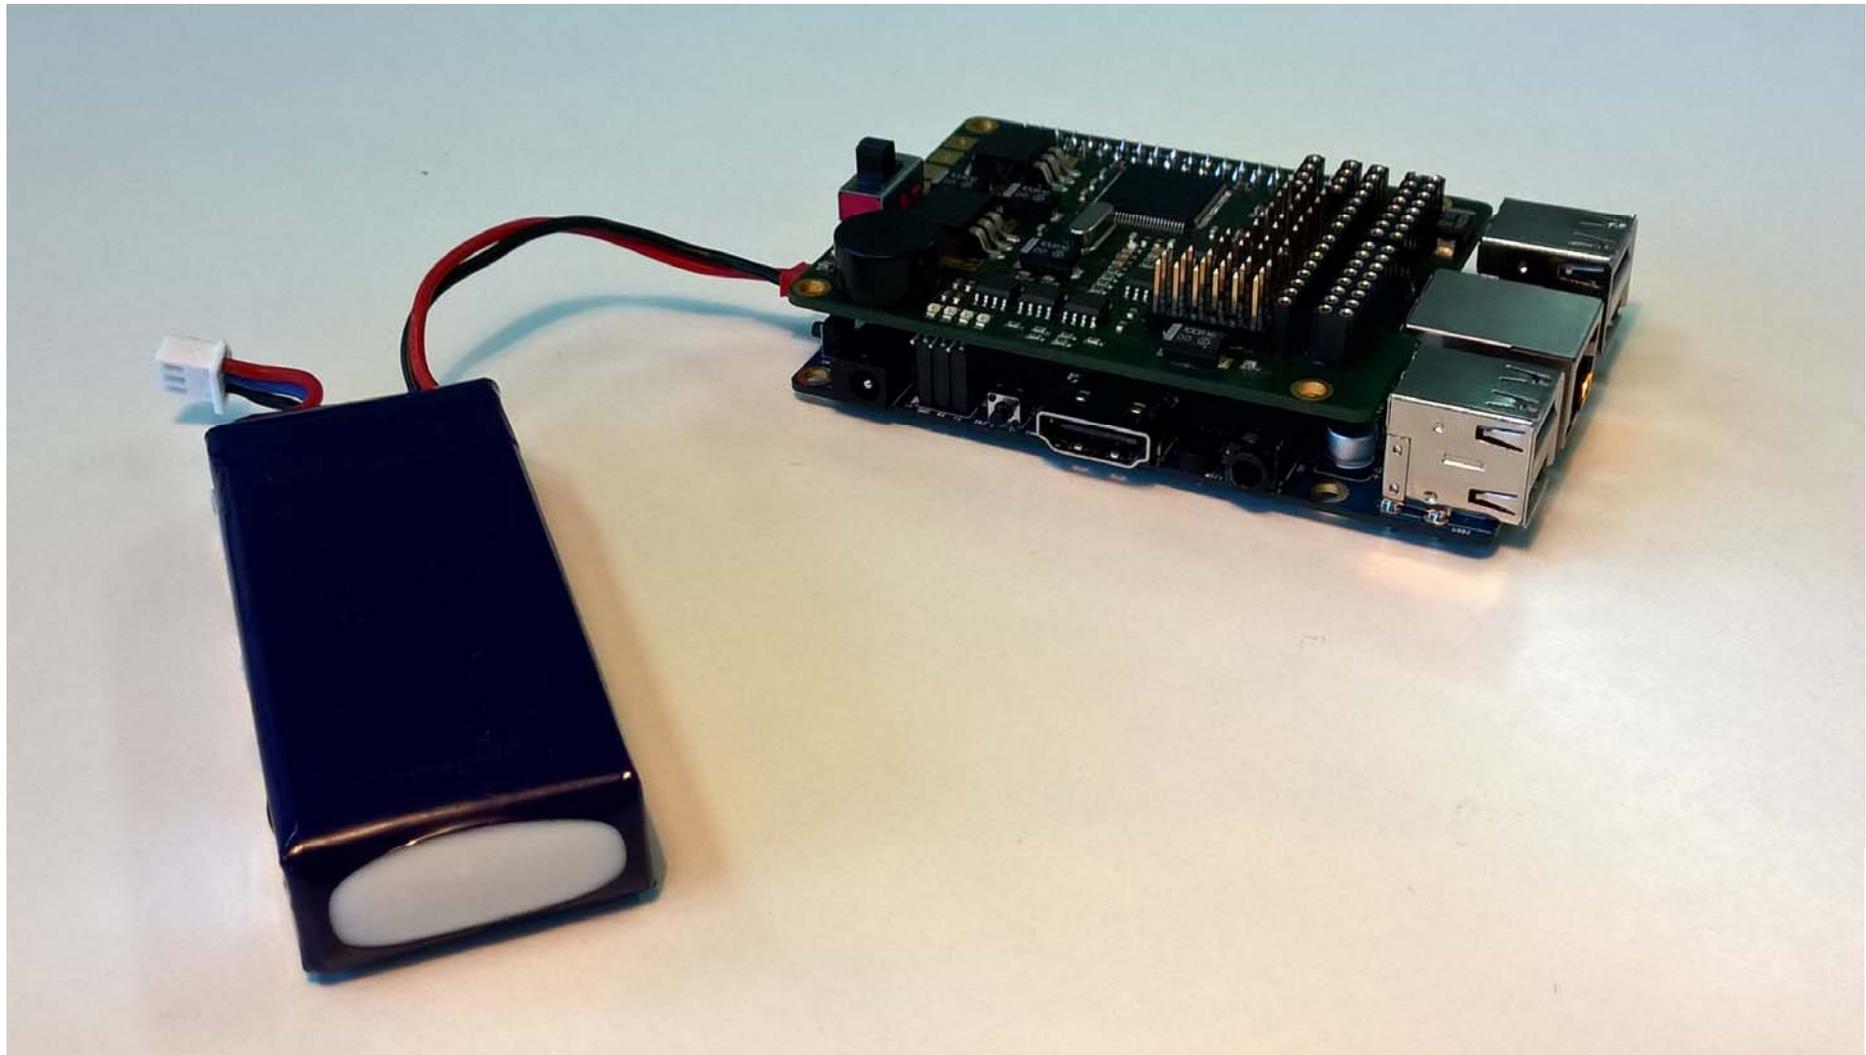

FFG 839097, COIN Aufbau, 2013-2016

ER4STEM

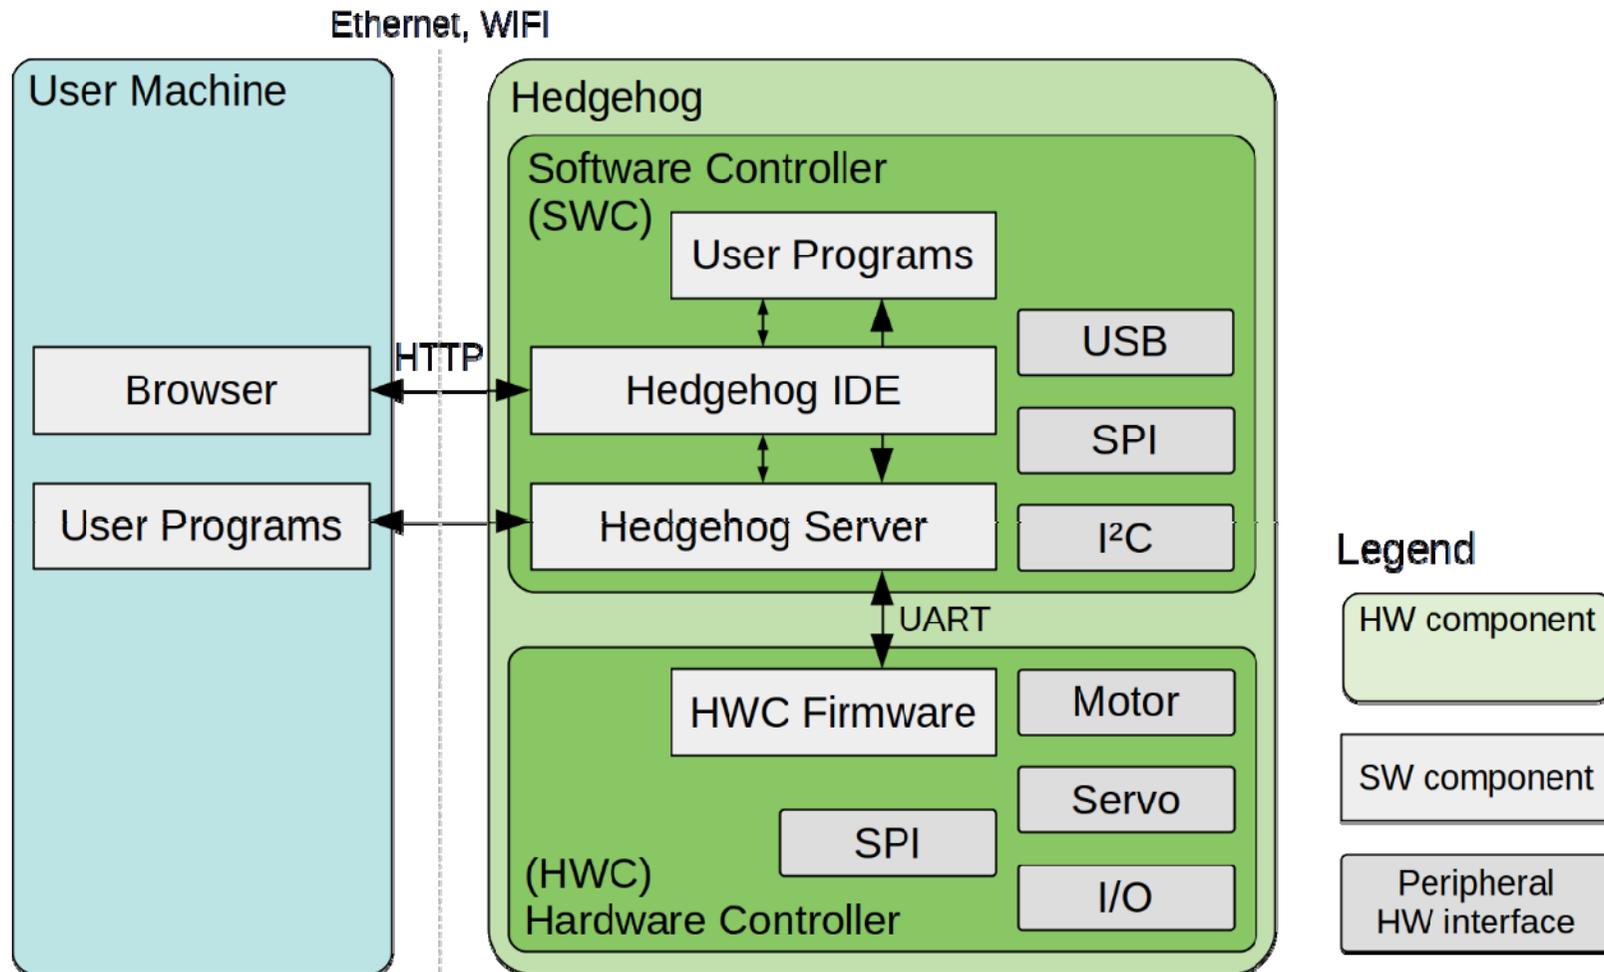

EU 665972, SwafS SEAC-1-2014, 2015-2018

Hedgehog

Hedgehog's hardware components

Hedgehog's connectors

Connector	Count	Description
Motor	4	2 pin connector, motor driver
Servo	6	standard RC servo connectors
Digital I/O	8	3 pin connector, configurable as input & output; optional pullup or pulldown resistors for input
Analog Input	8	3 pin connector, 12-bit analog/digital converter inputs with optional pullup or pulldown resistors; can also be used as additional digital I/O pins
UART	1	Universal Asynchronous Receiver/Transmitter from Microcontroller
I ² C Bus	1	Inter-integrated circuit from Raspberry Pi
I ² C Bus	1	Inter-integrated circuit from Microcontroller
SPI	2	Serial Peripheral Interface from Raspberry Pi
SPI	1	Serial Peripheral Interface from Microcontroller

KnowDrift

Knowledge-Driven Industrial Robotics
for Flexible Production

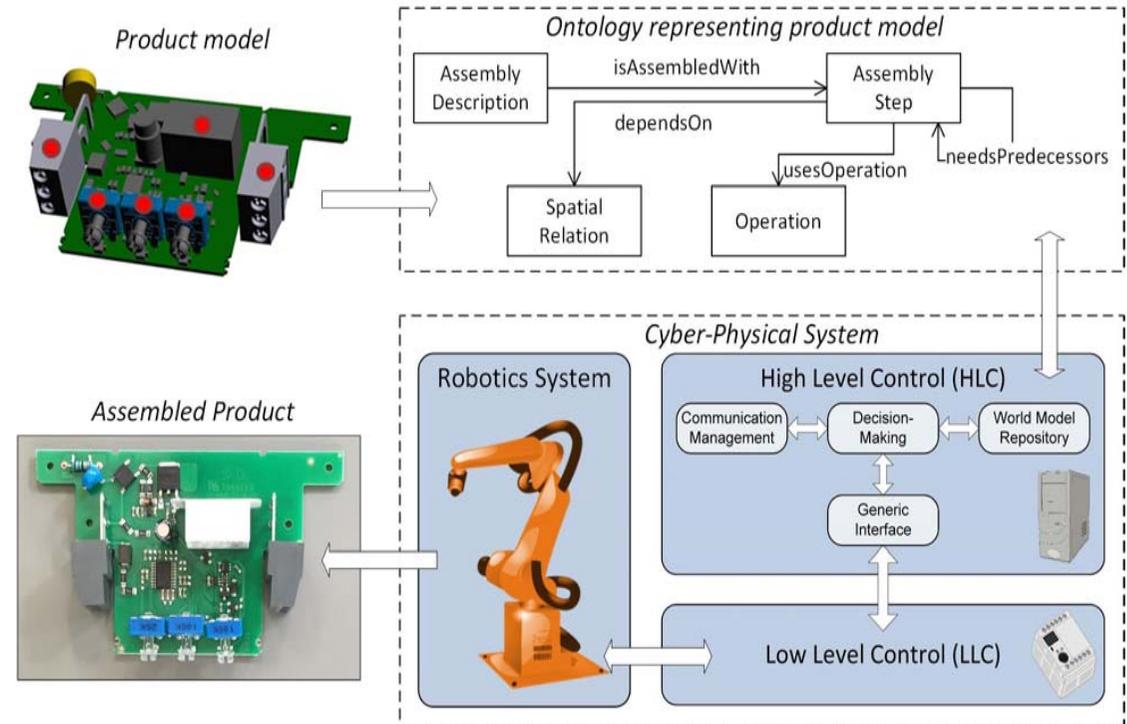

FFG 858707, Produktion der Zukunft, 2017-2019

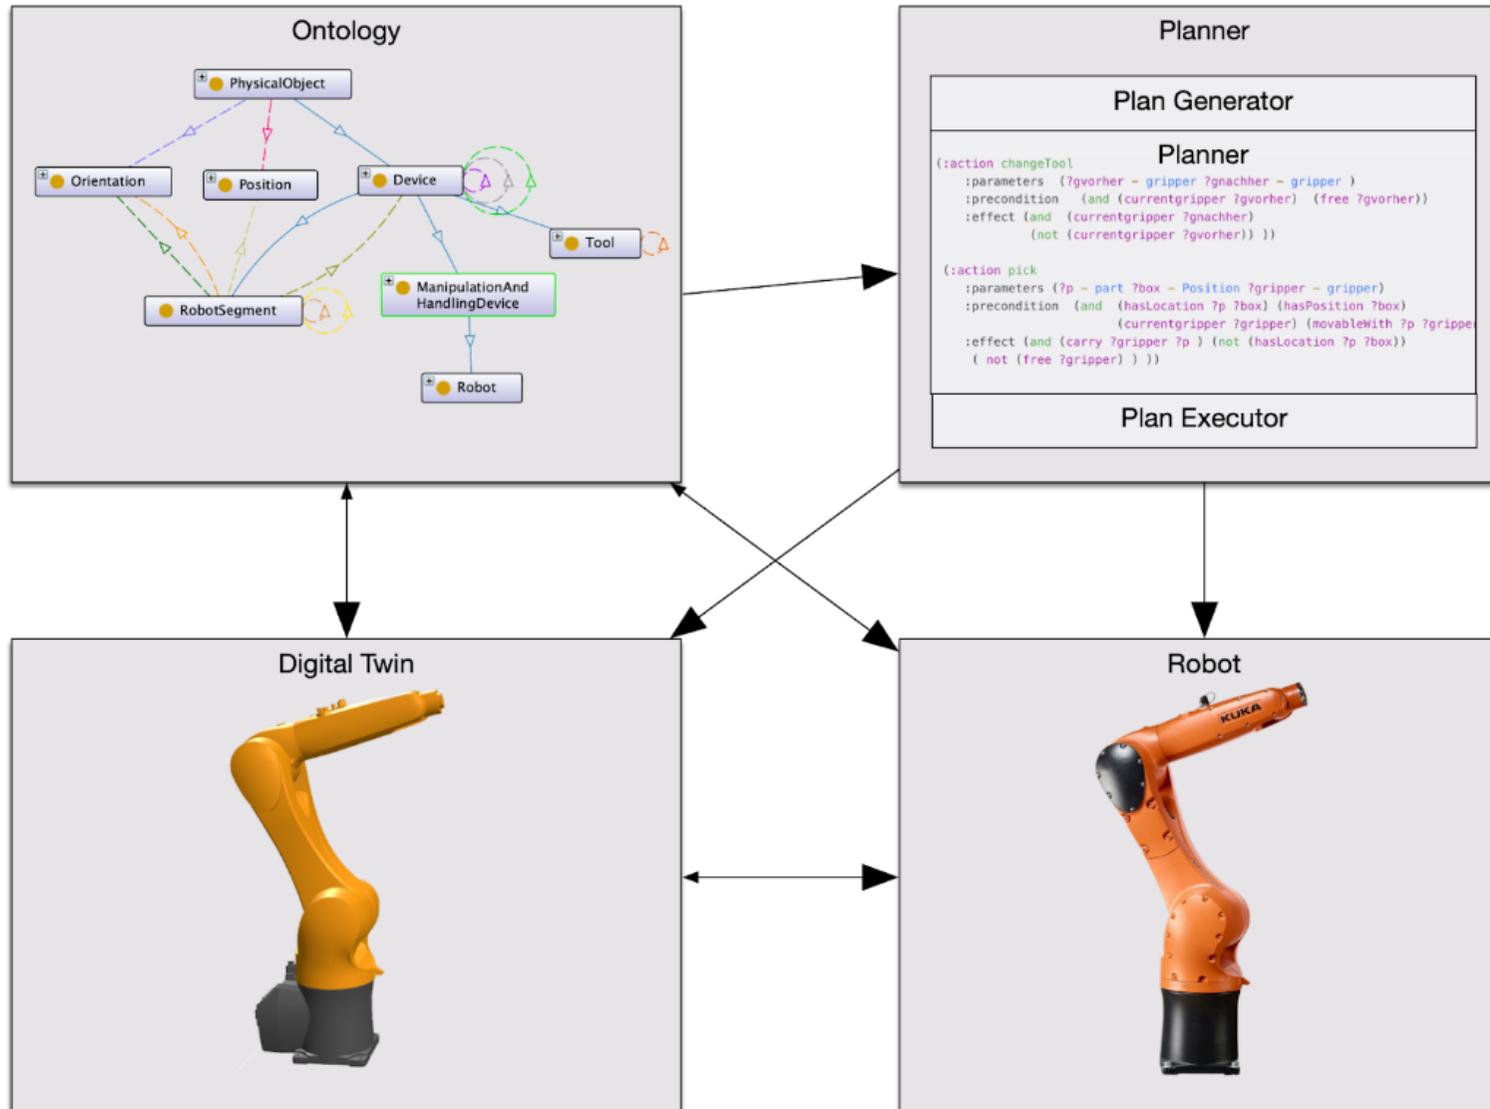

Project KnowDrift

The aim of project KnowDrift is the development of a knowledge-intensive CPS for an automated control, programming, configuration and monitoring of a robotics system:

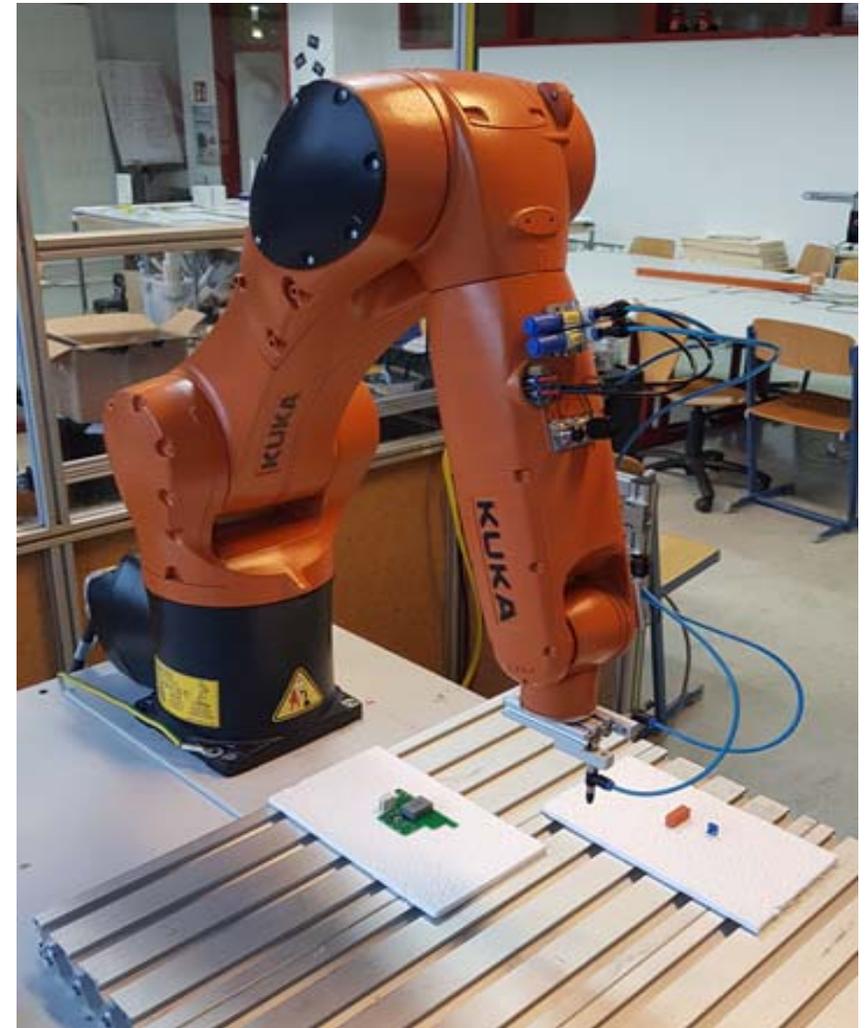

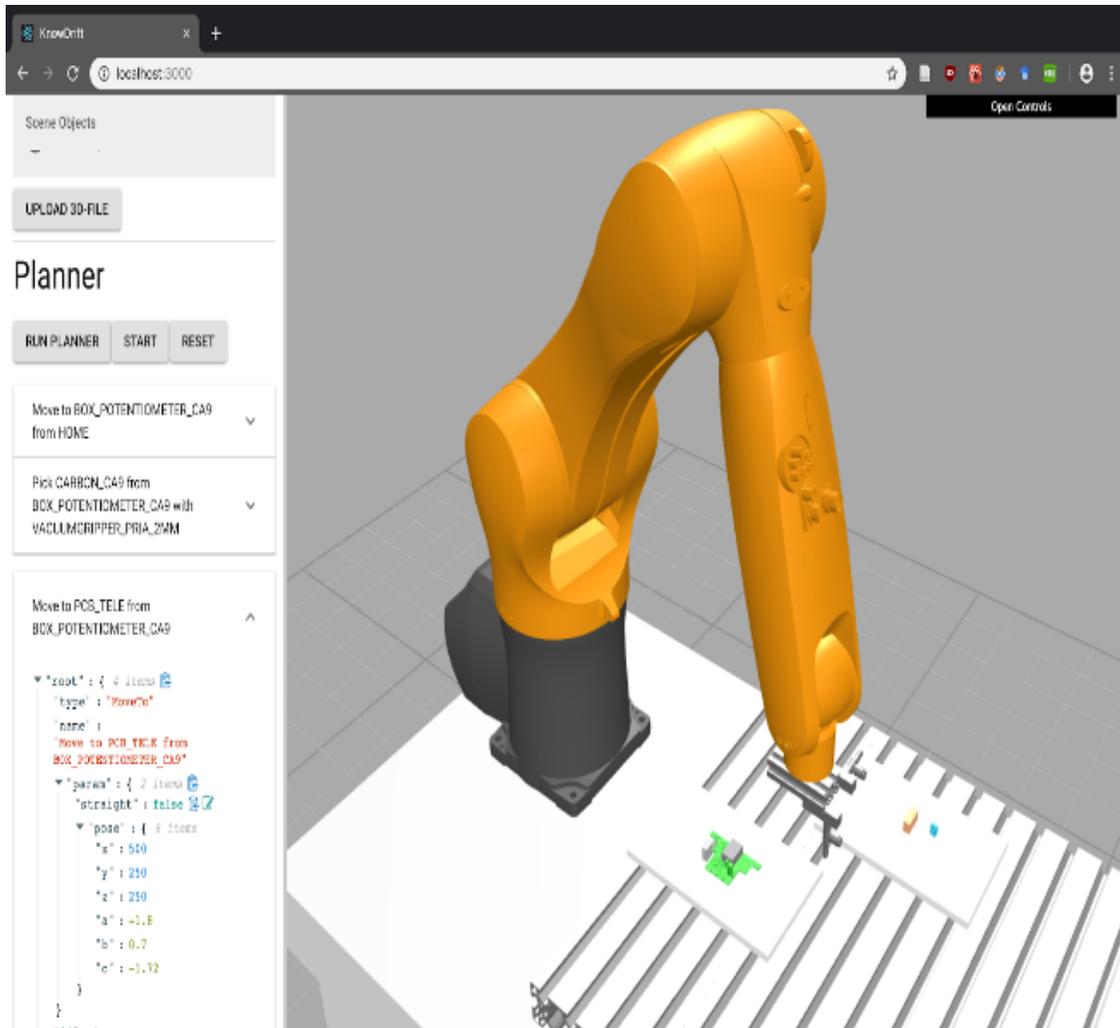

- Usage of an ontology-based product model to extract the production operations from the product design and link particular tasks, to particular resources; and
- a two-layer-based knowledge-intensive CPS control architecture that spreads real-time and reasoning layer with integrated knowledge about own goals, skills and behaviours.

Implemented framework of the Digital Twin

Digital Twin demonstrator application
